SUMMARY

I am a mobile application developer proficient in Flutter and Dart, specializing in building high-performance applications with interactive user interfaces. I have experience developing integrated applications with backend APIs, utilizing provider management and local data storage. I have worked on developing diverse systems, including car rental applications and industrial facility management systems encompassing financial and administrative processes. I am passionate about developing practical and scalable solutions and am committed to continuously learning new technologies and improving software quality.

EDUCATION

- **Information Technology Engineering** - Al Shahbaa Private University, 2020 – 2025

Top Projects

Careppo

A mobile car rental application developed using Flutter allows users to view available cars, see their details (photos, specifications, and features), and easily track requests. The application supports a login system and other features, including a "guest mode" with additional functionalities. It integrates with a backend API for data creation and booking, utilizing provider-side case management and local room groups using Shared Preferences. The application also includes an interactive user interface for account status updates and online communication.

MyFacility

This industrial facility management application offers a comprehensive account creation and login system (with fingerprint authentication support) and features a main dashboard displaying the company's balance, outstanding and receivables, and the date of the last inventory. The application includes several management systems such as sales and purchasing management, employee management, inventory, receivables, and customer accounts. It also supports currency exchange rate input and automatic balance recalculation, as well as the ability to export data to PDF files.

Technical SKILLS

- **Programming Languages:** Flutter , dart

Additional skills

- **Programming :** Html , Css , Javascript , Php
